## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3/23/05 has been entered.

### ***Allowable Subject Matter***

2. Claims 1-14 are allowed.

3. The following is an examiner's statement of reasons for allowance:

As claims 1, 7 and 12 the prior arts in the record fail to disclose or make obvious to a system and method for obtaining a signal type information for each input signal by judging whether each input signal is a speech and voice band signal or an ISDN digital signal, and further judging a signal type of each input signal that is judged as the speech and voice band signal; dynamically changing a compression scheme of each input signal into a most appropriate compression scheme selected from a plurality of different compression schemes with different compression rates, which is determined by using the silence information obtained at the step (a) and the signal type information obtained at the step (b), and compressing each input signal using the most appropriate compression scheme as claims 1 and 7 and a packet disassembling unit for disassembling the received packets obtained by the ATM cell disassembling unit into received

signals, and obtaining a silence section information by detecting positions at which silence sections are to be inserted in the received signals entered from the ATM network; a signal compression scheme judgment unit for judging a signal compression scheme of each received signal obtained by the packet disassembling unit, as one or a plurality of different compression schemes with different compression rates; a signal expansion unit for expanding each received signal by using the silence section information obtained by the packet disassembling unit and the signal compression scheme judged by the signal compression scheme judgment unit; and a silence reproduction unit for reproducing silence sections in signals expanded by the signal expansion unit by using the silence section information obtained by the packet disassembling unit so as to generate STM signals, and transferring the STM signals to the STM network as claim 12 within a structure of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
